

Illinois Municipal Electric Agency
Annual Report
2024

A Message from the President & CEO and the IMEA Board Chairman

It has now been 40 years since a group of Illinois municipalities that operated their own electric distribution systems banded together to form the Illinois Municipal Electric Agency (IMEA), a non-profit special unit of local government. Wary of the risk exposure associated with their individual wholesale power deals, those member municipalities collectively wanted to take control of their own destiny as it related to procuring predictably priced, affordable wholesale electricity for their communities. The aim was to avoid energy market spikes that would devastate their municipal utility operating budgets and – worse – expose their citizens to reduced system reliability and dramatic cost increases on their electric bills.

So, after all this time, how's it going in 2024?

As to affordability and predictability, we'll let the numbers speak for themselves. The average costs to IMEA member municipalities have been remarkably consistent, with an annual increase of just 1.6% over the last two years. In fiscal year 2024, the average total cost per MWh to IMEA member municipalities was 3.8% lower than the original budget amount. For the last decade as a whole, the average cost of power to members has averaged 1.8% under the start-of-the-year budget.

The agency has achieved these levels of predictability and affordability thanks to its well planned and executed compilation of an energy portfolio that includes long-term power supply contracts and ownership stakes in baseload generation units, along with economically layering in an increasing percentage of renewable generation resources. That strategy has allowed the agency to manage the energy component of

the wholesale cost of electricity to its members extremely well. While transmission costs (which are borne by all utilities and are out of IMEA's control) have more than tripled over the past decade, ***the energy cost to IMEA members was 4.3% less in 2024 than it was in 2014.***

In addition to beating the budget, IMEA accomplished much in 2024. We continued to be a voice in state and federal policymaking, by monitoring and participating in Federal Energy Regulatory Commission (FERC) proceedings, the Regional Transmission Owner (RTO) stakeholder process, and the Transmission Owner ratemaking process. Through our management of the Illinois Municipal Utilities Association (IMUA) and our affiliation with such groups as the American Public Power Association (APPA), we provided education and training opportunities for municipal utility personnel. We also have continued to provide value-added services, such as electric efficiency, demand response, and electric vehicle charging station programs that are tailor-made to meet the specific needs of IMEA's municipal electric systems.

Forty years of meeting members' evolving needs for new services while also successfully controlling their wholesale electric costs speaks to the sustainability of the joint action agency business model in general and confirms the sustainability of this agency in particular. We realize, of course, that much of the general public now considers the word "sustainability" to relate to energy that comes from using fuels that are renewable (such as wind or solar) or that can be used with lower impact on the climate (such as hydropower or

Continued on next page

Continued from previous page

geothermal). When it comes to sustainability in that sense of the word, IMEA has been ahead of the curve, adding 70 MW of wind to our portfolio in 2009 and continuing to add wind and solar-based generation to the portfolio ever since. In fiscal year 2024, the IMEA Board made its vision for this type of sustainability even more clear by adopting a Sustainability Plan that seeks to deliberately and economically reduce to net-zero the carbon emissions of the power supply delivered to IMEA member communities by 2050.

Given the successes IMEA and its members have enjoyed, it is tempting to say that the goals our founders set 40 years ago have been met once and for all but, the fact is, the industry and its related markets always change. The past 40 years saw the formation of the regional transmission organizations, the advent of electric industry deregulation in Illinois, and the private sector's reluctance to build any new large-scale baseload generation assets in this state. IMEA helped its municipal members negotiate and mitigate the pitfalls in this changing landscape. The outlook for the next 40 years offers only more change. Concerns arise about the effects of an aging transmission and retiring generation infrastructure, regulatory uncertainty, and challenges to grid reliability that may be brought about by a future that seeks to depend on an electrified transportation system and which increasingly leans on power hungry artificial intelligence technology to solve its problems.

We at the agency are convinced that the IMEA was a forward-thinking idea four decades ago and will be a prudent decision for many decades to come. IMEA member communities agree. In February 2024, the IMEA Board unanimously approved offering a contract that allows IMEA's communities to extend their beneficial relationship with the agency from the end of the current power supply contract in 2035 through May 31, 2055. The board asked member municipalities to execute the new contract by April 30, 2025. The governing bodies of 23 communities approved the new contract within the first six months of the opening of this window of opportunity. We anticipate more members will come on board soon.

We are humbled and heartened by the eagerness with which our members have embraced the opportunity to work together through this agency to remain actively in charge of their energy future. We believe these new contracts are a literal vote of confidence in the successes we've achieved so far and are a re-affirmation of the efficacy of the collaborative, member-driven way we've delivered favorable results for the communities we serve. However, we also fully recognize that these new contracts come with the obligation to sustain our efforts and continue to meet – and often exceed – the needs and expectations of our member municipalities.

We are prepared to do just that.

Who We Are

The Illinois Municipal Electric Agency (IMEA) is a nonprofit unit of local government comprised of 32 municipal electric systems from across Illinois. Each of those communities owns and operates its own electric distribution system. Nineteen operate local power generation plants.

Since its creation in 1984, the focus of the IMEA has been on the reliable delivery of bulk power and energy to its members at low and stable prices. IMEA combines the power needs of all its members and secures the electricity necessary to satisfy those needs. The agency sells its municipal members all their wholesale power needs under long-term power supply contracts.

To fulfill its mission, IMEA has assembled a portfolio of power supply resource ownership and power supply contracts. These include ownership of a minority portion of large, base-load power plants in Kentucky and Illinois, favorably priced medium and long-term contracts, medium and short-term bilateral purchases of capacity and energy, and purchases from the market when needed. From time to time, IMEA uses the power plants owned and operated by members to help meet the membership's needs.

IMEA is working to purchase a growing portion of its capacity and energy from non-carbon emitting generation sources, with a plan for reducing to net-zero the carbon emissions of the power supply the agency delivers to its member municipalities by 2050.

IMEA backs its commitment to power supply excellence with a 24-hour-a-day, seven-days-a-week Operations Department staffed by highly skilled power supply professionals. In addition, IMEA provides engineering, legal, communications, economic development, value-added services, and legislative and regulatory oversight services for its members.

The agency is governed by a board of directors appointed by its members. The professional staff administers day-to-day operations.

Powering Progress for 40 Years

In May 1984, representatives from 27 municipalities took their first meeting as the Board of Directors of the Illinois Municipal Electric Agency (IMEA). The aim of the agency was to jointly plan for – and manage the cost of – the procurement of bulk wholesale power for their municipal electric systems. At first, the agency met members' needs primarily through negotiating favorable long-term power supply contracts. As the years passed and market conditions changed, the agency grew and adopted more long-term strategies to further insulate its members from market volatility. For example, the agency has chosen to own shares of baseload generation facilities in Kentucky and Illinois and is a party to two major wind contracts.

At the turn of this century, the agency set a then-record of delivering 1.7 million MW hours of electricity to its member municipalities. Now, IMEA serves 32 member municipalities, providing them with anywhere from 3.7 to 4.0 million MW hours of electricity each year. Agency services have also expanded. As you'll learn in the pages that follow, IMEA provides its member municipal electric departments with the programs and expertise required to meet the demands of a changing energy industry and an ever more sophisticated customer base.

At this point, it may be tempting to look back and enumerate the many successes of the past four decades. However, not even the most appreciative retail customer in any of the unabashedly "Midwest nice" towns IMEA serves would sigh and reminisce about how wonderful it was that the lights came on yesterday. Nor would we want them to. This agency and the municipal electric systems it serves do not flourish by resting on their laurels. We mark our years of progress, sure, but we – as we have for forty years – serve best when we continuously look forward to anticipate and meet the needs of the communities that depend on us.

IMEA Empowers Member Communities

Like the cities and villages that govern it, the Illinois Municipal Electric Agency (IMEA) is a nonprofit unit of local government. IMEA produces or secures bulk power and provides for that power to arrive at the members' delivery points. From there, the locally managed electric systems distribute power to the municipality's retail customers.

The agency fulfills its core mission through power supply contracts and through ownership shares of generation facilities. IMEA backs up its power supply commitment with its always-on-duty Operations Department that constantly monitors and executes actions in the day-ahead and the real-time energy markets as needed. Each day, Operations Department staff schedule into both of Illinois' Regional Transmission Organization markets the amount of energy forecasted for the next day's consumption and also schedule the next day's anticipated output from IMEA's generation assets. To assure reliability 24-hours-a-day, 365-days-a-year, Operations Department personnel monitor all member municipality delivery points and alert local utility personnel immediately of any voltage dips, power supply interruptions, or other system anomalies. In an extreme event that causes a loss of power, IMEA Operations Department staff will alert the coordinators of the Illinois Municipal Utilities Association's (IMUA) Mutual Aid Program to contact volunteer crews from other member municipalities to help an IMEA or IMUA member community restore service to its customers.

But the agency provides more than wholesale power and first-class operations services. IMEA's relationships with member communities respect and reflect the principle of local control and precipitate member-driven results. Each community has a voting representative on the

IMEA Board of Directors – a seat at the table – driving all major decisions about every aspect of their community’s wholesale power supply resources and services. No other wholesale power provider can match the extent to which the agency’s governance structure allows its member communities to set policy directions, and no other power supplier has the resources and expertise to tailor its services specifically for Illinois’ municipal electric systems the way that IMEA has since its inception. Thus, IMEA shares its member electric systems’ commitment and duty to reliably serve their communities for the long run.

Thanks to the direction of its board, the agency operates under the guiding principles of:

- Affordability
- Reliability, and
- Sustainability

As a nonprofit entity, IMEA does not strive for shareholder profits. Rather, the agency seeks to provide predictable, competitively priced wholesale energy, shielding our municipal members from market volatility.

Cost Stability

If this industry’s recent market activity – especially in the capacity market – has proven anything, it is this: Wild fluctuations and price spikes are not phenomena from the distant past.

The Midcontinent Independent System Operator (MISO), which is the regional transmission organization for central and southern Illinois, holds auctions that determine the cost of capacity for its various zones, including its footprint in central and southern Illinois (known as MISO Zone 4). A shortage of generating capacity, combined with other factors, drove the MISO Zone 4 capacity auction price from \$5.00 per megawatt (MW) day for the 2021-22 auction year to \$236.66 per MW day for the 2022-23 auction year – a 47-fold increase over the prior year. MISO has since changed from an annual capacity auction to a seasonal capacity auction. We expect more volatility moving forward in the MISO capacity markets.

Even more recently, Pennsylvania-New Jersey-Maryland Interconnection (PJM), the regional transmission organization whose market territory includes northern Illinois, held its latest annual capacity auction in July 2024 for Planning

How IMEA Delivers Electricity to its Municipalities

IMEA is a not-for-profit agency governed by its 32 member municipalities

Year 2025-26, starting in June 2025. The auction cleared at \$269.92 per megawatt day in the northern Illinois region (commonly known as the ComEd Zone). The year prior auction cleared at \$28.92 megawatt day. Thus, the cost per megawatt day increased a staggering 833%. The Illinois Citizens Utility Board estimates these auction results will spur a significant cost increase of 1.5 to 2 cents per kWh (or 10% to 15%) to customers served by the private-sector electric utility in the region.

Obviously, a municipal utility would be hard pressed to accomplish stable, long-term financial forecasting given these extreme capacity cost fluctuations. However, the foresight of the IMEA Board of Directors flattened that volatility for IMEA member communities in the MISO region in 2022-23 and should similarly mitigate the spike in the PJM region in 2025-26. The IMEA Board has directed the agency to:

- Own generation assets (because long-term resources bring long-term stability),
- Commission behind-the-meter generation resource projects in many member communities, and
- Contract for fixed-price purchases of energy and capacity.

These actions have created a hedge against the type of budget-busting cost fluctuation that occurred in the recent capacity auctions. In the marketplace, the agency's diversified portfolio of owned and contracted power sources – wind, hydro, solar, and coal-fueled – is accomplishing a goal it was designed to achieve: Stability.

Predictable and Affordable Costs

IMEA members' wholesale power costs are predictable and competitive. Members can rely on the accuracy of the agency's budget as they plan their own municipal budgets. As the graph on the next page shows, the average cost of power to member municipalities has been at or below the start-of-the-year IMEA budgeted cost for eight out of the past 10 years (a decade that included two years of the COVID pandemic, which made electric usage nearly impossible to predict accurately). For the decade as a whole, the average cost of power to members has averaged 1.8% under the start-of-the-year budget.

IMEA has a proven record of holding down the costs it can control to assure that wholesale power remains affordable. Excluding transmission and RTO costs (which are borne by all market participants and are outside of IMEA control), IMEA's power supply costs are lower now than they were in 2014 and are projected to remain flat through at least 2028. Even with transmission cost increases, total average costs to members are up just 10% from where they were a decade ago.

IMEA Provides Value-Added Services that are Tailor-Made for Municipal Electric Utilities

Unlike any other wholesale energy providers operating in the state, IMEA develops and delivers services and programs made specifically for municipal electric utilities. Member municipal systems know that they can lean on IMEA to strengthen their local efforts to provide efficient solutions to the growing challenges in the electric industry. The agency employs engineers, power market experts, power resource specialists, state and federal regulatory compliance specialists, and program administrators who provide services

Original Budget Average Member Cost vs. Actual Average Member Cost

Note: Electric usage dropped dramatically during the COVID years of 2020 and 2021, which made predicting that usage nearly impossible and drove up the average cost per kWh.

that are only possible through this agency. These services include:

- Offering members support in interpreting and complying with the North American Electric Reliability Corporation (NERC) and Federal Energy Regulatory Commission (FERC) standards and regulations, as well as state and federal laws related to operating municipal electric systems.
- Representing member interests through expert participation in the state's two Regional Transmission Organizations' (RTO) electric and capacity markets.
- Providing regulatory and legal defense for all assets, including generation and transmission.
- Paying capacity credits and fuel costs for members with municipally owned behind-the-meter generation assets.
- Creating and administering programs focused on electric efficiency, demand response, and electric vehicles and electric vehicle charging infrastructure, as well as a renewable energy credit purchase and offset program, which helps members and their retail customers reduce energy costs and municipalities achieve their specific green-energy goals.
- Working with the American Public Power Association (APPA) and the Illinois Municipal Utilities Association (IMUA) to take an advocacy role on issues impacting state and national energy policy.
- Developing specialized rates for large-load, high load-factor commercial/industrial customers to help member municipalities attract or retain high-value commercial or manufacturing facilities that enhance the tax revenue base and increase employment in member communities.
- Managing the IMUA and the Illinois Public Energy Agency (IPEA) for the benefit of public power and publicly owned natural gas supply systems across the state.
- Applying for state and federal grant funds to help establish potential new collective endeavors for municipal electric utilities, such as an emergency equipment share program.

Operations and Value-Added Services

NERC cyber compliance

Power Supply Scheduling

Representation in Regional Transmission Organizations

Electric Efficiency Incentives

Negotiate Transmission and Sub-transmission contracts

Green Power Choices REC purchasing program

Electric Vehicle and Infrastructure Incentives

State and Federal Legislative Advocacy

Legal & Regulatory Defense of Assets

Grid Management services – Demand Response

24 Hour Member System Support for Outages and Emergencies

Capacity & Fuel Payments for Local Generation

Under management services contracts, IMEA operates the Illinois Municipal Utilities Association (IMUA) and the Illinois Public Energy Agency (IPEA).

Formed in 1948, the IMUA is a statewide trade association that provides a variety of services to 49 municipal members, including advocacy activities before the Illinois General Assembly and other administrative and regulatory bodies both in Illinois and at the federal level, including Congress. IMUA offers an array of training programs and activities for municipal electric, natural gas, telecommunications, water, and wastewater treatment utility personnel.

IMUA also administers a voluntary mutual aid program designed to assist members with the restoration of energy services and other vital community services in the event of natural disasters. That mutual aid program most notably proved its worth in the wake of a derecho that, on June 29, 2023, blasted the central part of Illinois with 90 miles-an-hour straight-line winds accompanied by hail and tornados. A dozen communities served by municipal electric

systems lost power due to storm damage. A couple sustained significant outages for close to a week. IMUA coordinated the effort to move crews and materials from 13 other public power communities across the state to restore electric service.

The City of Naperville sent a line crew, a bucket truck and other necessary equipment 188 miles across the state to assist with restoration efforts in the Village of Chatham when a derecho caused widespread damage to the village on June 29, 2023. This crew from Naperville provided mutual aid to the village for nearly a week.

The IPEA, which began operations in January 2005, is a wholesaler of natural gas to 11 municipal systems and two cooperative natural gas systems across Illinois. The not-for-profit agency procures and arranges for the delivery of wholesale natural gas to members’ city gates. IPEA also provides natural gas hedging opportunities for its member municipalities. IPEA has become one of the leading natural gas joint action agencies in the Midwest.

Electric Efficiency, Electric Vehicle Charging Station, Demand Response, and Renewable Energy Credit Programs

The agency’s Electric Efficiency Program began with a pilot program in 2009 and then continued as an ongoing effort starting in 2010. In that time, the agency has offered \$14 million for incentives for the purchase and installation of energy efficient technologies for IMEA members and their commercial and industrial electric customers. In recent years, offerings have expanded to include residential smart thermostats and home air conditioning and heat pump systems. As of August 20, 2024, more than 1,220 electric efficiency projects had been completed since the start of

the program. For fiscal year 2022-23 (the last year for which a complete set of data is currently available), member municipalities and their commercial and industrial customers are currently deemed to have reduced energy consumption by more than 34.5 million kWh. The agency estimates that IMEA-incentivized electric efficiency projects reduced carbon emissions by 13,306 metric tons that year.

IMEA led Illinois utilities with the introduction of its Electric Vehicle (EV) Charging Station Initiative in 2020. Now known as the Electric Vehicle Charging Station & Electric Vehicle Program, the program has helped incentivize more than 445 residential customers to install EV charging stations. Under this program, each year the agency makes \$250,000 available for municipal members to:

- Own or lease EV fast charging stations for public use,
- Own or lease electric vehicles for municipal use, or
- Incentivize retail customers to install EV charging stations.

IMEA’s Green Power Choices Renewable Energy Credit (REC) Program is an IMEA value-added service that represents one more option member municipalities and their retail customers have to reduce their CO² footprint and aid in achieving their renewable energy objectives. Green Power Choices is a highly flexible way for IMEA

Annual Incremental CO₂ Reductions Through IMEA Energy Efficiency Programs

(in metric tons)

Note: At the time of this writing, 35% of FY2022-23 electric efficiency projects had yet to be completed. Results are recorded only after projects are finished. The estimated useful life of all electric efficiency measures is assumed to be five years.

municipalities and their retail customers to purchase these green credits. RECs obtained and retired through this program are apart from and in addition to the RECs that accrue to IMEA from the renewable resources that are part of the agency's portfolio.

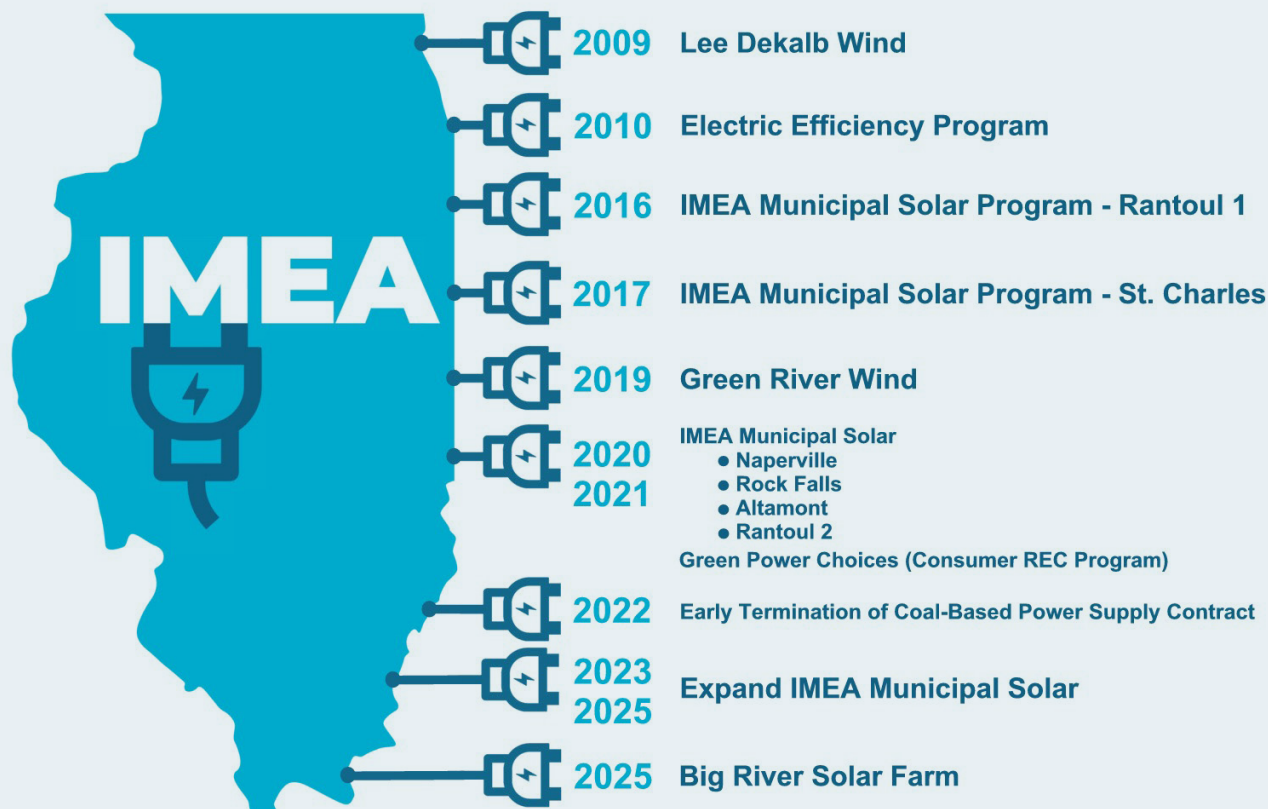

The IMEA Electric Vehicle Charging Station & Electric Vehicle Program has provided incentives for a total of 451 charging stations located in residential garages and in public spaces.

IMEA Works with its Municipal Members to Achieve a Reliable, Responsible Transition to a Greener Energy Future

IMEA's diversified portfolio of owned generation and purchased power agreements has provided reliable and predictably priced wholesale electricity for member communities. The agency's minority ownership stakes in the Prairie State Generating Company (a mine-mouth power plant with two 800-megawatt, coal-fueled supercritical generating units near Marissa, Illinois) and the Trimble County 1 and 2 generating facility (a 1,274-megawatt, 2-unit, subcritical and supercritical, pulverized coal-fueled power plant in Kentucky) have well served – and will continue to serve – much of our member municipalities' baseload power needs for a number of years. These facilities are fitted with the best available emissions control technologies and are among the most efficient in the nation.

Prairie State is slated to reduce its CO₂ emissions by 45% by 2038 and will be at zero CO₂ emissions by 2045, in accordance with the 2021 Climate and Equitable Jobs Act. This will mark another step in the responsible transition to renewables that IMEA began in 2009, when it was among the first large-scale purchasers of wind power in the state. Since that time, the agency has increased its use of carbon-free resources. The percentage of IMEA's fiscal year 2024 load that came from generating resources that are carbon-free, including wind, solar and municipally owned hydro, was slightly more than 10%. The agency is increasing its renewable resources and transitioning the portfolio in a fiscally responsible fashion that ensures an affordable and reliable power supply. In fiscal year 2023-24, IMEA entered contracts to add a total of 2.5 MW of new solar energy located within the electric systems of three municipal members. These projects are in the process of being built. In addition, IMEA is under contract to purchase 25 MW of solar energy

Current Investment in Renewable Energy and Carbon Reduction

from Big River Solar. This is a solar project located in Illinois that became operational in 2022. This contract has a June 2025 start date.

The timeline above illustrates the agency's commitment to renewable energy.

IMEA has been involved in renewable generation and energy efficiency programs because it is the right thing to do for our members, and the market continues to validate the importance of maintaining a diversified portfolio. Looking to the future, IMEA's member municipalities have provided a clear vision that has accelerated – and will continue to accelerate – the agency's investments in renewable generation resources. In keeping with the principles that have guided the agency for 40 years, this transition to less carbon-emitting resources will be achieved under an approach that keeps sustainability, affordability, and reliability firmly in mind.

IMEA seeks to add 130 MW of solar to its energy portfolio in 2025-26.

Illinois Municipal Electric Agency

IMEA Board Forms a Net-Zero Emissions Plan

At its December 2023 meeting, the IMEA Board of Directors adopted the agency's Sustainability Plan, which sets forth the agency's vision for reducing to net-zero the carbon emissions of the power supply delivered to member municipalities by 2050. You can access the plan at the agency's website at www.imea.org.

The formalization of the plan is the latest step in a journey toward a new energy future, which IMEA began in 2009 when the agency was among the first large-scale purchasers of wind power in the state. Since that time, the agency has continuously increased its use of carbon-free resources. In 2024, carbon-free and/or renewable energy resources provided slightly more than 10% of IMEA's energy requirements.

The Roadmap Forward

The IMEA Sustainability Plan is based on a roadmap forward that:

- Targets reductions in greenhouse gases.
- Increases the agency's renewable generation resources to replace current resources.
- Allows the flexibility needed to embrace changes in technology, such as battery storage.
- Continues and expands energy efficiency program incentives to IMEA communities and their residents.
- Reduces resource capacity needs by accelerating demand response options, and
- Advances electric vehicles and electric vehicle infrastructure.

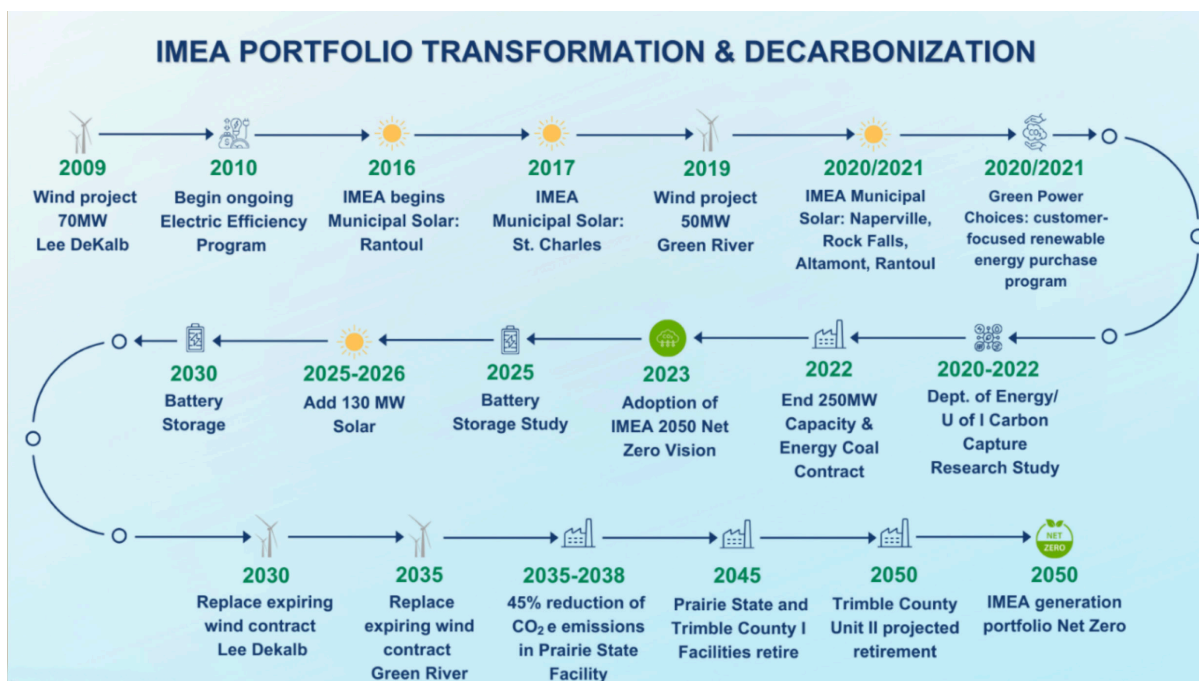

A Member-Generated, Living, Evolving Document

This transition can't happen overnight. To attain IMEA's vision of a net-zero portfolio by 2050, commercially viable innovations will need to occur. Given that level of technological uncertainty, the Sustainability Plan is designed to evolve as new opportunities present themselves.

Staff will report to the IMEA Board on the progress of the plan on an annual basis. Every three years, the governing bodies of IMEA member municipalities will have the opportunity to engage in a stakeholder process aimed at reviewing and updating the plan.

That collaboration-based revision process echoes the genesis of this first iteration of the plan. A working group comprised of seven IMEA Board members met about once a month from February to October 2023 to envision and write the plan that was presented to the full IMEA Board in October 2023 and adopted in December 2023. The working group represented the geographic and demographic diversity of the IMEA member communities to encompass viewpoints from board members representing north, central, and southern parts of the state, as well as small, medium, and large member communities.

The group quickly realized that ever-changing factors, such as future load growth, economic conditions, changing regulatory demands, the increasing electrification of the transportation sector, the need for new transmission lines, and the evolving feasibility of energy storage could all influence plans for how to achieve a net-zero goal. Thus, as conditions warrant, this document will be reviewed and updated to reflect progress and future strategies and targets.

Source: IMEA Sustainability Plan 2024

The Five Sustainability Principles Behind the Plan

As can be seen from the graphic above, IMEA and its members must work now to acquire renewable energy resources to serve the member communities for the next generation. This drive to acquire additional solar resources and to begin to replace other renewable supply resources in the coming years will ensure that IMEA's members have a phased, sequential transition to the agency's net-zero goals.

Though the specific actions that the agency will undertake to achieve its net-zero vision by 2050 may change as new opportunities arise, the plan is anchored by five principles. Briefly stated, these are to:

1. Provide an affordable, reliable, and sustainable power supply to member communities.
2. Design and facilitate energy conservation programs in support of the concept that the most sustainable watt is the watt not generated.
3. Offer flexible programs to mitigate peak loads, increase reliability, and better integrate clean energy potential.

4. Enable, accelerate, and integrate electric vehicle use and accompanying charging infrastructure.
5. Maintain and support a sustainable workplace.

A Plan Based on a History of Achievement

IMEA does not make plans lightly. Whether agency board members are considering budgets, reliability, or value-added services, the IMEA Board sets challenging – but, measurable, reachable, and realistic – goals. Unachievable, pie-in-the sky plans may grab headlines, but our member communities don't need headlines. They need the type of reliable results the agency has delivered for them since its inception 40 years ago. That is why IMEA's plan will result in an economically responsible and (ultimately) a technologically feasible transition to a net-zero power supply over a 25-year period. With the guidance of this plan – and its future, member-driven revisions – IMEA looks forward to realizing the vision set forth in the Sustainability Plan.

Summary of IMEA Sales to Members

Fiscal Year Ending April 30, 2024

	Non-Coincident Peak Demand (kW)	Energy Usage (kWh)	Population*
Participating Members			
Altamont	6,729	24,663,795	2,188

Independent Auditors' Report

To the Board of Directors of
Illinois Municipal Electric Agency

Opinion

We have audited the accompanying financial statements of Illinois Municipal Electric Agency (IMEA), as of and for the years ended April 30, 2024 and 2023, and the related notes to the financial statements, which collectively comprise the IMEA's basic financial statements as listed in the table of contents.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of IMEA as of April 30, 2024 and 2023, and the changes in financial position and cash flows for the years then ended in accordance with accounting principles generally accepted in the United States of America.

Basis for Opinion

We conducted our audits in accordance with auditing standards generally accepted in the United States of America (GAAS). Our responsibilities under those standards are further described in the Auditors' Responsibilities for the Audit of the Financial Statements section of our report. We are required to be independent of IMEA and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audits. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Responsibilities of Management for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with accounting principles generally accepted in the United States of America; and for the design, implementation and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is required to evaluate whether there are conditions or events, considered in the aggregate, that rise substantial doubt about IMEA's ability to continue as a going concern for twelve months beyond the financial statement date, including any currently known information that may raise substantial doubt shortly thereafter.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinions. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statements.

Baker Tilly Advisory Group, LP and Baker Tilly US, LLP, trading as Baker Tilly, are members of the global network of Baker Tilly International Ltd., the members of which are separate and independent legal entities. Baker Tilly US, LLP is a licensed CPA firm that provides assurance services to its clients. Baker Tilly Advisory Group, LP and its subsidiary entities provide tax and consulting services to their clients and are not licensed CPA firms.

In performing an audit in accordance with GAAS, we:

- Exercise professional judgment and maintain professional skepticism throughout the audit.
- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of IMEA's internal control. Accordingly, no such opinion is expressed.
- Evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statements.
- Conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about IMEA's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings and certain internal control-related matters that we identified during the audit.

Required Supplementary Information

Accounting principles generally accepted in the United States of America require that the required supplementary information, as listed in the table of contents be presented to supplement the basic financial statements. Such information is the responsibility of management and, although not a part of the basic financial statements, is required by the Governmental Accounting Standards Board who considers it to be an essential part of financial reporting for placing the basic financial statements in an appropriate operational, economic or historical context. We have applied certain limited procedures to the required supplementary information in accordance with auditing standards generally accepted in the United States of America, which consisted of inquiries of management about the methods of preparing the information and comparing the information for consistency with management's responses to our inquiries, the basic financial statements, and other knowledge we obtained during our audit of the basic financial statements. We do not express an opinion or provide any assurance on the information because the limited procedures do not provide us with sufficient evidence to express an opinion or provide any assurance.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Illinois Municipal Electric Agency

Management's Discussion and Analysis
April 30, 2024 and 2023
(Unaudited)

The management of the Illinois Municipal Electric Agency ("IMEA") offers all persons interested in the financial position of IMEA this narrative overview and analysis of IMEA's financial performance during the years ending April 30, 2024 and 2023. Please read this narrative in conjunction with the accompanying financial statements and the accompanying notes to financial statements.

Overview of the Financial Statements

The Illinois Municipal Electric Agency is a body politic and corporate, municipal corporation and unit of local government of the State of Illinois. IMEA was created in 1984 under the provisions of Division 119.1 of Article II of the Illinois Municipal Code by a group of municipalities. The purpose of IMEA is to jointly plan, finance, own and operate facilities for the generation and transmission of electrical power and energy-related facilities to provide for the current and projected energy needs of the purchasing members. IMEA has thirty-two (32) members, each of which is a municipal corporation in the State of Illinois and owns and operates a municipal electric system.

This annual report consists of two parts: Management's Discussion and Analysis (this section) and the financial statements. These statements are prepared on the accrual basis of accounting in accordance with accounting principals generally accepted in the United States of America. IMEA uses the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission.

The Statements of Revenues, Expenses and Changes in Net Position present information showing how IMEA's net position changed during the most recent year due to IMEA's business activity. The Statements of Net Position report year end assets, deferred outflows of resources, liabilities and net position balances based on the original cost adjusted for any depreciation, amortization or unrealized gains/losses as appropriate. Over time, increases or decreases in IMEA's net position are one indicator of whether its financial health is improving or deteriorating. Other factors to consider include the Agency's wholesale electric rates and ability to maintain or exceed the debt coverage levels required by its bond resolution.

IMEA Financial Analysis

An analysis of IMEA's financial position begins with the review of the Statements of Net Position and the Statements of Revenues, Expenses and Changes in Net Position. A summary of IMEA's Statements of Net Position is presented in Table 1 and the Statements of Revenues, Expenses and Changes in Net Position are summarized in Table 2.

Noncurrent liabilities	687,516,625	751,897,317	799,974,305
Current liabilities	75,394,460	75,355,256	76,791,516
Total Liabilities	<u>762,911,085</u>	<u>827,252,573</u>	<u>876,765,821</u>
Total Net Position and Liabilities	<u>\$1,209,079,634</u>	<u>\$1,226,808,729</u>	<u>\$1,230,651,588</u>

Statements of Net Position

Year Ended April 30, 2024

IMEA's total utility plant decreased by \$24,520,861 during the year ended April 30, 2024. The Agency made total payments of \$11,601,700 toward the capital improvements associated with the Prairie State project, Trimble County Units 1 & 2 projects and other smaller capital acquisitions and improvements. Total current liabilities associated with these capital improvements were \$929,797. These capital investments net of depreciation accounted for most of the changes in utility plant. Depreciation expense of \$35,989,197 was recorded during the year.

IMEA had an increase in the cash and short-term investments held in operating reserve accounts of \$8,631,266 from the previous year. Accounts receivable decreased by \$1,272,895 from the previous year. Prepayments increased by \$2,724,731 from the previous year. The value of renewable energy credits held at the end of the year decreased by \$811,965. These changes along with a decrease in the value of bond interest subsidy receivable and an increase in collateral held for others at the end of the year represent much of the increase in current assets of \$9,184,554.

Proceeds of revenue bonds not yet expended are included in restricted assets. The decrease in restricted assets of \$489,979 was primarily caused by a return of excess funds following the Trustee's (BNY Mellon) annual cash valuation calculations.

Net position increased due to the current year's operations that resulted in net income of \$46,612,393.

See accompanying independent auditors' report

Illinois Municipal Electric Agency

Management's Discussion and Analysis
 April 30, 2024 and 2023
 (Unaudited)

Principal repayments associated with the Agency's outstanding revenue bonds totaled \$47,750,000. IMEA is scheduled to repay an additional \$50,005,000 on the outstanding revenue bonds on February 1, 2025, which is included in current liabilities. The Agency also had current year payments of \$2,000,000 with no draws against a line of credit facility available to IMEA bringing the total outstanding draws on the line of credit to \$0. The total undrawn portion of this line of credit was \$50,000,000.

Year Ended April 30, 2023

IMEA's total utility plant decreased by \$22,718,363 during the year ended April 30, 2023. The Agency made total payments of \$11,714,574 toward the capital improvements associated with the Prairie State project, Trimble County Units 1 & 2 projects and other smaller capital acquisitions and improvements. Total current liabilities associated with these capital improvements were \$999,073. These capital investments net of depreciation accounted for most of the changes in utility plant. Depreciation expense of \$35,331,150 was recorded during the year.

IMEA had an increase in the cash and short-term investments held in operating reserve accounts of \$25,450,663 from the previous year. Accounts receivable decreased by \$3,110,650 from the previous year. Prepayments increased by \$4,174,424 from the previous year. These changes along with a decrease in the value of bond interest subsidy receivable, an increase in the value of renewable energy credits held at the end of the year and an increase in collateral held for others at the end of the year represent much of the increase in current assets of \$28,086,418.

Proceeds of revenue bonds not yet expended are included in restricted assets. The increase in restricted assets of \$1,242,986 was primarily caused by a rise in the market value of investments being held in restricted accounts.

Net position increased due to the current year's operations that resulted in net income of \$45,670,389.

Principal repayments associated with the Agency's outstanding revenue bonds totaled \$45,675,000. IMEA is scheduled to repay an additional \$47,750,000 on the outstanding revenue bonds on February 1, 2024, which is included in current liabilities. The Agency also had current year payments of \$2,000,000 with no draws against a line of credit facility available to IMEA bringing the total outstanding draws on the line of credit to \$2,000,000. The total undrawn portion of this line of credit was \$48,000,000.

Other income/(expense)	57,133	(12,174)	(19,127)
Total Non-Operating Expenses	(22,294,706)	(30,390,746)	(36,004,263)
Change in Net Position	46,612,393	45,670,389	38,805,597
Net Position, Beginning of Year	399,556,156	353,885,767	315,080,170
Net Position, End of Year	\$446,168,549	\$399,556,156	\$353,885,767

Statements of Revenue, Expenses and Changes in Net Position

Year Ended April 30, 2024

Sales to participating members of \$302,188,273 and 3,660,103,092 kilowatt hours ("kWh") were recorded during the fiscal year ended April 30, 2024. This represented a decrease of \$580,773 (0.2 percent) in revenue from sales to participating members and a decrease of 101,094,732 kWh (2.7 percent) as compared with the previous year. Energy sales were lower this year as compared to the previous year due to milder temperatures over the summer and winter across Illinois.

IMEA recorded a coincident peak demand of 973 MW, which was approximately 6.2 percent higher than the 915 MW experienced in the previous year. The total member non-coincident peak demand was 987 MW, which was approximately 4.1 percent higher than the 948 MW experienced in the previous year.

The average cost of power sold to the participating members with capacity credits of 8.03 cents per kWh was approximately 2.6 percent higher than the 7.82 cents per kWh from the previous year.

See accompanying independent auditors' report

Illinois Municipal Electric Agency

Management's Discussion and Analysis
April 30, 2024 and 2023
(Unaudited)

Total operating expenses increased by \$7,071,262 (3.0 percent) from the previous year due primarily to higher purchased power expenses. Purchased power expenses went up 38.1 percent from the previous year due to IMEA having a more favorable position in the energy markets during the previous fiscal year. Operation and maintenance expenses at generating units went up 0.4 percent from the previous year mainly due to inflation. Transmission expenses, which are outside of IMEA's control, went down 13.0 percent. There has been a trend of increasing transmission expenses seen over the last several years, IMEA made use of prior year excess revenues received from MISO in connection to IMEA's Auction Revenue Rights and Financial Transmission Rights to create a regulatory credit of \$7,550,000. This regulatory credit was used evenly across all 12 months of fiscal year 2024 to offset increases in transmission expenses. Fuel at generating units went down 4.6 percent from the previous year due to the cost of coal at Trimble County Units returning to a level more consistent with history. Fuel reimbursements decreased by 20.4 percent due to member generation being called to generate less than prior year. Non-operating expenses decreased by \$8,096,040 (26.6 percent) from the previous year due primarily to lower interest expense and higher interest income. Interest expense decreased by 6.0 percent primarily due to payments made to reduce outstanding revenue bonds. Interest Income increased by 150.9 percent due to interest rates paid on IMEA's investments being much higher than the previous year.

Year Ended April 30, 2023

Sales to participating members of \$302,769,046 and 3,761,197,824 kilowatt hours ("kWh") were recorded during the fiscal year ended April 30, 2023. This represented a decrease of \$5,647,512 (1.8 percent) in revenue from sales to participating members and a decrease of 94,931,249 kWh (2.5 percent) as compared with the previous year. Energy sales were lower as compared to the previous year due to relatively normal temperatures in Illinois during fiscal year 2022, this year saw a mild summer and winter across Illinois.

IMEA recorded a coincident peak demand of 915 MW, which was approximately 0.7 percent lower than the 921 MW experienced in the previous year. The total member non-coincident peak demand was 948 MW, which was approximately 1.0 percent higher than the 939 MW experienced in the previous year.

The average cost of power sold to the participating members with capacity credits of 7.82 cents per kWh was approximately 0.6 percent higher than the 7.77 cents per kWh from the previous year.

Total operating expenses decreased by \$2,200,488 (0.9 percent) from the previous year due primarily to lower purchased power expenses. Purchased power expenses went down 34.9 percent from the previous year due to IMEA having a favorable position in the energy markets during the current fiscal year. Operation and maintenance expenses at generating units went up 18.4 percent from the previous year due to more outage days. Transmission expenses, which are outside of IMEA's control, went up 20.0 percent. This trend of increasing transmission expenses is consistent with the trend IMEA has seen over the last several years. Fuel at generating units went up 7.3 percent from the previous year due to the increased cost of coal at Trimble County Units. Fuel reimbursements increased by 28.7 percent due to member generation being called to generate more than the previous year. Non-operating expenses decreased by \$5,613,517 (15.6 percent) from the previous year due primarily to lower interest expense and higher interest income. Interest expense decreased by 5.3 percent primarily due to payments made to reduce outstanding revenue bonds. Interest Income increased by 467.3 percent due to interest rates paid on IMEA's investments being much higher than the previous year.

Debt Service Coverage

IMEA's bond resolution requires the Agency to maintain a debt service coverage ratio of 110 percent. Debt service coverage for the year ended April 30, 2024 was approximately 136.4 percent and approximately 136.7 percent for the year ended April 30, 2023. IMEA made no transfers during the year ended April 30, 2024 or during the year ended April 30, 2023 into the rate stabilization account, transfers would have reduced debt service coverage.

Illinois Municipal Electric Agency

Management's Discussion and Analysis
April 30, 2024 and 2023
(Unaudited)

Significant Events

IMEA reached an agreement with Illinois Power Marketing (IPM), a wholly owned subsidiary of Vistra Corp., to shorten the term of a long-term, baseload purchase power agreement. The original term of the agreement was set to end on September 30, 2035, with an amended term through May 31, 2026. IMEA and IPM set a new end date of May 31, 2022 that coincided with the MISO Planning Year. As part of the shortened long-term agreement, IMEA is purchasing capacity and energy from IPM for one year, that year began on June 1, 2022 and ended on May 31, 2023 via a market-based transaction. This one-year agreement ended in fiscal year 2024. IMEA is evaluating carbon-free resources and market purchases to replace the energy and capacity it procured from this purchase power agreement.

For the Delivery Year that began on June 1, 2022 and ended on May 31, 2023, IMEA received excess revenues of approximately \$12,300,000 from credits received from MISO in connection with IMEA's Auction Revenue Rights (ARRs) and Financial Transmission Rights (FTRs), which are treated as offsets to transmission-related expenses ("Excess Transmission Credits"). IMEA used a portion of the Excess Transmission Credits (\$4,750,000) to repay and retire a previously established regulatory asset and the remainder (\$7,550,000) to establish a regulatory credit to forgo an otherwise needed Delivery Service rate increase for fiscal year 2024. The regulatory credit allowed the remaining Excess Transmission Credits to be carried forward from fiscal year 2023 to fiscal year 2024, the regulatory credit allowed for the Excess Transmission Credits to offset delivery service expenses in fiscal year 2024. The funds in the regulatory credit were allocated evenly (1/12th) each month of fiscal year 2024.

Renewable and Carbon-Free Energy Resources

IMEA has a contract to purchase 70 MW of wind energy from the Lee-Dekalb wind project owned by FPL Energy Illinois Wind, LLC and another contract to purchase 50 MW of wind from the Green River Wind Farm that was developed by Geronimo Energy, LLC. Two of IMEA's members own and operate run-of-the-river hydroelectric generation that totals nearly 10 MW of carbon-free energy for IMEA. IMEA also has contracts for the purchase of approximately 5 MW of solar energy located within five of IMEA's member electric systems. These resources provide IMEA with carbon-free and/or renewable energy resources totaling slightly more than 10 percent of IMEA's energy requirements. In FY2024, IMEA entered contracts to add a total of 2.5 MW of new solar energy located within the electric systems of three members, these projects are in the process of being built. In addition, IMEA is under contract to purchase 25 MW of solar energy from Big River Solar, this is a solar project located in Illinois that became operational in 2022. This contract has a June 2025 start date. IMEA is working with an experienced solar vendor, SolAmerica, to potentially add 11 MW of solar to be located within the electric systems of IMEA members. IMEA continues to evaluate additional carbon-free resources and will seek and evaluate additional opportunities to increase the amount of energy it procures from renewable or carbon-free resources. When the above referenced IPM agreement expired on May 31, 2023, IMEA no longer has any carbon-based purchase power agreements in place.

Contacting IMEA's Management

This financial report is designed to provide our members, investors and creditors with a general overview of IMEA's finances. Questions concerning any of the information provided in this report or requests for additional information should be addressed to Illinois Municipal Electric Agency, 3400 Conifer Drive, Springfield, IL 62711.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

1. Summary of Significant Accounting Policies

The financial statements of the Illinois Municipal Electric Agency (IMEA) have been prepared in conformity with accounting principles generally accepted in the United States of America as applied to enterprise funds of governmental units. The Governmental Accounting Standards Board (GASB) is the accepted standard-setting body for establishing governmental accounting and financial reporting principles.

The significant accounting principles and policies utilized by IMEA are described below.

Reporting Entity

IMEA is a body politic and corporate, municipal corporation and unit of local government of the State of Illinois. IMEA was created in May 1984 under the provisions of Division 119.1 of Article II of the Illinois Municipal Code (the Act) by a group of municipalities for the purpose of jointly planning, financing, owning and operating facilities for the generation and transmission of electrical power and energy-related facilities which are appropriate to the present and projected energy needs to such municipalities. IMEA is owned and its policies governed by its member municipalities.

IMEA has provided the power and energy requirements of certain members since 1986, primarily through the purchase of wholesale requirements service from power providers and through IMEA owned generation. The contracts with power providers, which obligate IMEA to purchase electric energy for concurrent resale to its members, are in effect through September 2035.

As of April 30, 2024, IMEA had 32 member municipalities, all of which have executed long-term power sales contracts for the purchase of full requirements power and energy from IMEA. The original termination date for all of the power sales contracts with participating members is September 30, 2035. These members participate in the IMEA owned generation facilities and pay rates sufficient to meet the obligations of IMEA's bond resolution. Per resolutions 24-04-900 through 24-04-909, 10 members have signed new contracts in April 2024 to extend their termination dates to May 31, 2055.

Measurement Focus, Basis of Accounting and Financial Statement Presentation

The financial statements are prepared using the economic resources measurement focus and the accrual basis of accounting. Under the accrual basis of accounting, revenues are recognized when earned and expenses are recorded when the liability is incurred or economic asset used. Revenues, expenses, gains, losses, assets and liabilities resulting from exchange and exchange-like transactions are recognized when exchange takes place. IMEA uses the Uniform System of Accounts prescribed by the Federal Energy Regulatory Commission.

Preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Assets, Deferred Outflows of Resources, Liabilities and Net Position

Cash Equivalents

For purposes of the statement of cash flows, cash and cash equivalents have original maturities of three months or less from the date of acquisition.

Illinois Municipal Electric Agency

Notes to Financial Statements

April 30, 2024 and 2023

Accounts Receivable and Allowance for Doubtful Accounts

Accounts receivable are stated at the amount billed to members. Allowance for doubtful accounts is not considered necessary as IMEA has not historically experienced delays in payments for service rendered.

Renewable Energy Credits

Energy credits consist of renewable energy credits (RECs) held for sale and are valued at current market value. The RECs are obtained through the purchase of renewable energy resources.

Prepayments

The amount in prepaid items represents amounts paid which will benefit future periods, IMEA's payment for collateral for operating activities in the MISO and PJM transmission markets and advance payments to Trimble County and Prairie State for working capital.

Restricted Assets

Mandatory segregations of assets are presented as restricted assets. Such segregations are required by bond agreements and other external parties. Current liabilities payable from these restricted assets are so classified.

Prairie State, Other Long-Term Asset

Other long-term assets are comprised of the assets related to the prepayments made on a long-term parts agreement and collateral paid toward a self-insurance fund.

Regulatory Costs for Future Recovery

Expenses incurred and paid in the current and prior periods in which the benefit of the expense will be recovered and realized in future periods in accordance with GASB Statement 62, *Codification of Accounting and Financial Reporting Guidance Contained in Pre-November 30, 1989 FASB and AICPA Pronouncements*. See Note 9 for further discussion related to assets.

Unrealized Gains and Loss on Investments

Management has elected the use of regulatory accounting for its unrealized gains and losses on investments. Changing market gains and losses are not recognized as investment income until such time investments are sold or mature. Net unrealized gains and losses are reported as other assets on the Statement of Net Position.

Utility Plant

Utility plant is generally defined by IMEA as assets with an initial, individual cost of more than \$1,000 and an estimated useful life in excess of one year, except for jointly owned assets. In these cases, utility plant is capitalized based on policies defined by Louisville Gas & Electric Company and Prairie State Generating Company.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

Utility plant of IMEA is recorded at cost or the estimated acquisition value at the time of contribution to IMEA. Major outlays for utility plant are capitalized as projects are constructed. Interest incurred during the construction phase is reflected in the capitalized value of the utility plant constructed, net of interest earned on the invested proceeds over the same period. Utility plant is depreciated using the straight-line method over the following useful lives:

	Years
Utility Plant:	
Electric plant, Trimble County Units No. 1 and 2	20-53
Electric plant, Prairie State Units No. 1 and 2	40
Mobile generation	30
Land	-
Land improvements	10
Office building	10-31.5
Office furniture and equipment	5
Supervisory control and data acquisition equipment	5
Winnetka 138 interconnect	30
Other equipment	5

Coal reserves are depleted as the commodity is consumed using a rate which is based upon the cost to IMEA divided by the total estimated coal to be mined.

Deferred Outflow of Resources

A deferred outflow of resources represents a consumption of net position that applies to a future period and will not be recognized as an outflow of resources expense until that future time.

Loss on Refunding

The deferred change resulting from the refunding of debt is amortized over the shorter of the term of the refunding issue or the original term of the refunded debt.

Payables and Other Current Liabilities

Accounts payable represents current liabilities for power, jointly owned facilities and other payables. Other current liabilities represent accrued vacation benefits and accrued property taxes payable.

Other Liabilities

Other liabilities represent accrued sick leave, MISO ARR credit (Note 9) and asset retirement obligation (Note 7). Under terms of employment, employees are granted one day of sick leave per month. One-half of accumulated sick leave benefits are paid if the employee terminates service after at least 10 years of service. Accumulated sick leave and vacation benefits have been recorded in the financial statements.

Long-Term Obligations

Long-term debt and other obligations are reported as liabilities. Bond discounts and premiums are amortized over the life of the bonds using the effective interest method. Gains or losses on prior refundings are amortized over the remaining life of the old debt or the life of the new debt, whichever is shorter. The balance at year-end for premiums and discounts is shown as an increase or decrease in the liability section of the statement of net position. The balance at year-end for the loss on refunding is shown as a deferred outflow in the statement of net position.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

Revenues and Expenses

IMEA distinguishes operating revenues and expenses from nonoperating items. Operating revenues and expenses generally result from providing services and producing and delivering goods in connection with IMEA's principal ongoing operations. The principal operating revenues of IMEA are charges to members for sales and services. Operating expenses for IMEA include the cost of sales and services, administrative expenses and depreciation on capital assets. All revenues and expenses not meeting this definition are reported as nonoperating revenues and expenses.

IMEA billings are rendered and recorded monthly based on month-end metered usage.

Bond Subsidy Revenue and Receivable

This amount represents the accrued amount receivable under the Build America Bond Program (BAB) which provides a 35% subsidy for interest expense on the Series 2009 and 2010 revenue bond issues. The interest expense reduction is classified as nonoperating revenue.

The United States Federal Government was subject to the process of sequestration for the budget year ending September 30, 2024 and 2023 whereby foreseeable spending reductions for many Federal programs, including issuers of the BAB's, may directly affect the recovery of the BAB's subsidy. See Note 6 for further details.

Taxes

IMEA is exempt from State and Federal income taxes.

Rates

Rates charged to members are approved by the Board of Directors and were increased January 1, 2024. The approved rate includes adjustment clauses which are calculated monthly based on cost to serve member load.

Effect of New Accounting Standards on Current Period Financial Statements

GASB has approved Statement No. 100, *Accounting Changes and Error Corrections—an Amendment of GASB Statement No. 62*, Statement No. 101, *Compensated Absences*, Statement No. 102, *Certain Risk Disclosures* and Statement No. 103, *Financial Reporting Model Improvements..* When they become effective, application of these standards may restate portions of these financial statements.

Comparative Data

Certain amounts presented in the prior year data may have been reclassified in order to be consistent with the current year's presentation.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

2. Cash and Investments

IMEA's cash and investments consist of the following:

	Carrying Value as of April 30		Associated Risk
	2024	2023	
The Illinois Funds	\$ 51,191,265	\$ 19,722,379	Credit and interest rate
U.S. agency securities, implicitly guaranteed	24,019,400	70,842,085	Custodial credit, credit, concentration of credit and interest rate
U.S. treasuries	109,677,559	56,711,360	Custodial credit and interest rate
Money market fund	1,783,971	6,915,957	Custodial credit
Checking and savings	22,824,346	47,163,473	Custodial credit
Petty cash	500	500	Not applicable
Total	\$ 209,497,041	\$ 201,355,754	

IMEA's Trust Indenture authorizes IMEA to deposit funds only in banks insured by the Federal Deposit Insurance Corporation (FDIC). IMEA may also make investments in U.S. Government and federal agency obligations, investment grade bonds, commercial paper rated at the highest classification established by at least two standard rating services, money market mutual funds, repurchase agreements and The Illinois Funds.

Investments are stated at fair value, which is the amount at which an investment could be exchanged in a current transaction between willing parties. Fair values are based on methods and inputs as outlined in the fair value section of this note. Adjustments necessary to record investments at fair value are recorded in the operating statement as increases or decreases in investment income. Fair values may have changed significantly after year-end.

Deposits in each local and area bank are insured by the FDIC in the amount of \$250,000 for time and savings accounts and \$250,000 for demand deposit accounts (interest and noninterest bearing). Investments in The Illinois Funds are covered under securities pledged for all pool participants. The difference between the bank balance and carrying value is due to outstanding checks, deposits in transit and/or market value adjustments.

Custodial Credit Risk

Deposits

Custodial credit risk is the risk that in the event of a financial institution failure, IMEA's deposits may not be returned to IMEA. IMEA's investment policy requires collateralization of deposits above the amount insured by the FDIC. IMEA does not have any deposits exposed to custodial credit risk as of April 30, 2024 and 2023.

Investments

For an investment, custodial credit risk is the risk that, in the event of the failure of the counterparty, IMEA will not be able to recover the value of its investment or collateral securities that are in the possession of an outside party. All investments held as of April 30, 2024 and 2023, were considered to be in risk category one (investments held in trust on behalf of IMEA), therefore, not subject to custodial credit risk. IMEA's investment policy requires all investment securities be held by its agent in IMEA's name.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

Credit Risk

Credit risk is the risk that an issuer or other counterparty to an investment will not fulfill its obligations.

As of April 30, 2024 IMEA's investments were rated as follows:

Investment Type	Standard & Poor's	Moody's	Fitch
U.S. agency securities	AA+	Aaa	-
The Illinois funds	-	-	AAAmmf

As of April 30, 2023 IMEA's investments were rated as follows:

Investment Type	Standard & Poor's	Moody's	Fitch
U.S. agency securities	AA+	Aaa	-
The Illinois funds	-	-	AAAmmf

IMEA's investment policy requires that all investments be rated in highest or second highest categories by the national rating agencies.

Concentration of Credit Risk

Concentration of credit risk is the risk of loss attributed to the magnitude of IMEA's investment in a single issuer.

As of April 30, 2024 and 2023, IMEA's investment portfolio was concentrated as follows:

Issuer	Investment Types	Percentage of Portfolio	
		2024	2023
Federal Home Loan Bank Federal Farm Credit Banks Funding Corporation	U.S. agency securities, implicitly guaranteed	8%	45%
	U.S. agency securities, implicitly guaranteed	10	10

IMEA's investment policy states that no more than 50% of the total portfolio may be invested in one type of investment with the exception of the US government and its agencies.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

Interest Rate Risk

Interest rate risk is the risk that changes in interest rates will adversely affect the fair value of an investment.

As of April 30, 2024 IMEA's investments were as follows:

	Maturity (In Years)			
	Fair Value	Less than 1	1-5	Over 5
U.S. agency securities	\$ 24,019,400	\$ 10,931,515	\$ 13,087,885	\$ -
U.S. treasuries	109,677,559	77,917,418	25,064,111	6,696,030
Total	<u>\$ 133,696,959</u>	<u>\$ 88,848,933</u>	<u>\$ 38,151,996</u>	<u>\$ 6,696,030</u>

IMEA also has \$51,191,265 invested in The Illinois Funds, which are valued at amortized cost. The average maturity of The Illinois Funds is 120 days.

As of April 30, 2023 IMEA's investments were as follows:

	Maturity (In Years)			
	Fair Value	Less than 1	1-5	Over 5
U.S. agency securities	\$ 70,842,085	\$ 52,548,447	\$ 18,293,638	\$ -
U.S. treasuries	56,711,360	23,984,436	32,726,924	-
Total	<u>\$ 127,553,445</u>	<u>\$ 76,532,883</u>	<u>\$ 51,020,562</u>	<u>\$ -</u>

IMEA also has \$19,722,379 invested in The Illinois Funds, which are valued at amortized cost. The average maturity of The Illinois Funds is 120 days.

IMEA's investment policy states that investment securities should not mature later than the monies will be needed for the respective use.

Fair Value

IMEA categorizes its fair value measurements within the fair value hierarchy established by generally accepted accounting principles. The hierarchy is based on the valuation inputs used to measure the fair value of the asset. Level 1 inputs are quoted prices in active markets for identical assets; Level 2 inputs are significant other observable inputs; Level 3 inputs are significant unobservable inputs.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

The valuation methods for recurring fair value measurements as of April 30, 2024 and 2023 are as follows:

- Market approach – matrix pricing or market collaborative pricing

As of April 30, 2024 IMEA's fair values were rated as follows:

Investment Type	Total	Level 1	Level 2
U.S. agency securities:	\$ 24,019,400	\$ -	\$ 24,019,400
U.S. treasuries	109,677,559	109,677,559	-
Total	<u>\$ 133,696,959</u>	<u>\$ 109,677,559</u>	<u>\$ 24,019,400</u>

As of April 30, 2023 IMEA's fair values were rated as follows:

Investment Type	Total	Level 1	Level 2
U.S. agency securities:	\$ 70,842,085	\$ -	\$ 70,842,085
U.S. treasuries	56,711,360	56,711,360	-
Total	<u>\$ 127,553,445</u>	<u>\$ 56,711,360</u>	<u>\$ 70,842,085</u>

3. Jointly-Owned Facilities

Trimble County Unit No. 1

Pursuant to an ownership agreement entered into in September 1990, IMEA acquired an undivided 12.12% ownership interest (approximately 62 MW), as tenant in common, in the Trimble County Unit No. 1 generating facility from Louisville Gas and Electric Company. Trimble County Unit 1 is a 514 MW subcritical pulverized coal fired unit.

Trimble County Unit No. 2

Trimble County Unit 2, which was placed into commercial operation in January 2011, is a pulverized-coal super-critical unit of 750 MW nominal net rating located adjacent to Trimble County Unit 1. IMEA owns a 12.12% (approximately 91 MW) undivided interest as tenant in common in the unit.

Prairie State Project

IMEA is part of the consortium known as the Prairie State Generating Company, LLC that developed the Prairie State Project. IMEA owns a 15.17% (approximately 240 MW) undivided interest in the project. The Prairie State Project is a nominal 1,600 MW plant, utilizing two supercritical steam units of approximately 800 MW in size. Prairie State includes contiguous coal reserves and the operation of a coal mine to supply coal to the power plant. The first unit was placed into commercial operation in June 2012 and the second unit was placed into commercial operation in November 2012.

IMEA's share of the operating costs associated with these joint owned facilities are included in the accompanying financial statements.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

4. Funds

IMEA's Trust Indenture requires the segregation of bond proceeds, establishment of various funds and prescribes the application of IMEA's revenues. Also, it defines what type of securities that IMEA may invest in. Funds consist principally of cash, money market funds, federal securities and investments in The Illinois Funds. The fund's purposes and balances are summarized below.

Fund	Held By	Purpose
Revenue	IMEA	To initially receive revenues and to disburse them to other accounts.
Operations and Maintenance	IMEA	To pay operating and maintenance expenses.
Renewals and Replacements	IMEA	To provide funds to be applied to the payment of the costs of renewals, replacements and repairs.
General Reserve	IMEA	To receive surplus funds after all other accounts are funded.
Rate Stabilization	IMEA	To accumulate any revenues in excess of the 10% debt service coverage requirement which will be used to minimize rate fluctuations in the future.
Debt Service Account	Trustee	To accumulate principal and interest associated with each bond series.
Debt Service Reserve Account	Trustee	To establish a reserve to cover deficiencies in the Debt Service Account. Any excess may be used for other purposes.

The indenture requires that certain cash and investments be segregated. The following are accounts included in current and restricted assets at April 30, 2024 and 2023.

	2024	2023
Included in current assets:		
Revenue	\$ -	\$ 375
Operation and maintenance	53,200,482	47,163,100
Renewals and replacements	2,336,475	2,340,315
General reserve	11,233,022	8,634,923
Rate stabilization	45,500,000	45,500,000
General cash (not restricted by indenture)	500	500
Total current cash and investments	<u>\$ 112,270,479</u>	<u>\$ 103,639,213</u>
Included in restricted investment accounts:		
Debt service	\$ 21,082,206	\$ 20,935,167
Debt service reserve	76,144,356	76,781,374
Total restricted cash and investments	<u>\$ 97,226,562</u>	<u>\$ 97,716,541</u>

6. Long-Term Obligations

IMEA has issued the following revenue bonds:

Date	Purpose	Final Maturity	Interest Rates	Original Issue	Outstanding Amount 4/30/24
July 15, 2009	Debt service and capital improvements *	Feb. 1, 2035	5.33 – 6.13%	\$294,755,000	\$193,145,000
Nov. 30, 2010	Debt service and capital improvements *	Feb. 1, 2035	2.47 – 7.29	140,290,000	82,985,000
April 1, 2015	Refunding 2006 and 2007A bonds	Feb. 1, 2035	4.00 – 5.00	594,685,000	417,475,000

* The 2009C and 2010A revenue bonds are taxable Build America Bonds. IMEA receives a 35% interest subsidy from the federal government for these bonds. During Federal fiscal years 2024 and 2023, the U.S. federal government was subject to the process of sequestration reducing spending amounts for many programs including payments to the issuers of BAB's. A 5.7% reduction in payments for the federal budget year ended September 30, 2024 and 2023, was experienced. The subsidy payment is not taken into account in the debt service displayed below.

The annual debt service and sinking fund requirements of the remaining bonds to maturity are as follows:

	Principal	Interest	Total
Years ending April 30:			
2025	\$ 50,005,000	\$ 38,706,918	\$ 88,711,918
2026	51,725,000	35,867,222	87,592,222
2027	54,215,000	32,871,461	87,086,461
2028	56,805,000	29,732,542	86,537,542
2029	59,550,000	26,444,687	85,994,687
2030-2034	343,235,000	77,558,924	420,793,924
2035	78,070,000	4,044,598	82,114,598
Total	<u>\$ 693,605,000</u>	<u>\$ 245,226,352</u>	<u>\$ 938,831,352</u>

Repayment of the bonds is secured by a pledge of IMEA's revenues.

IMEA's outstanding revenue bonds contain event of default provisions with possible finance-related consequences. IMEA's management has evaluated the event of default provisions with possible finance-related consequences and in the opinion of IMEA's management; the likelihood is remote that these provisions will have a significant effect on IMEA's financial position or results of operations.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

Committed Line of Credit

On October 29, 2010, IMEA entered into a \$25 million Committed Line of Credit agreement (LOC Agreement) with PNC Bank. Under the LOC Agreement, IMEA may draw funds and/or post standby letters of credit. The LOC Agreement was increased to \$50 million on September 1, 2012 and expires on October 31, 2025. IMEA had \$0 outstanding under the LOC Agreement as of April 30, 2024 and \$2.0 million outstanding as of April 30, 2023.

Long-term obligation activity for the year ended April 30, 2024 is as follows:

	Balance 5/1/23	Additions	Reductions	Balance 4/30/24	Due Within One Year

Line of credit agreement	4,000,000	-	2,000,000	2,000,000	-
Unamortized premium	38,123,916	-	5,083,095	33,040,821	-
Other liabilities	16,495,389	20,971,082	14,214,975	23,251,496	-
Total	<u>\$ 845,649,305</u>	<u>\$ 20,971,082</u>	<u>\$ 66,973,070</u>	<u>\$ 799,647,317</u>	<u>\$ 47,750,000</u>

7. Accounting for Asset Retirement Obligations

An asset retirement obligation represents a legal obligation associated with the retirement of a tangible, long-lived asset that is incurred upon the acquisition, construction, development or normal operation of that long-lived asset.

The asset retirement obligation includes the closure of ash ponds at the Trimble County plant site and mine closure and mine reclamation at the Prairie State Generating facility. Other asset retirement obligations are not significant to these financial statements. IMEA used estimated cash flows to determine the obligation.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

The following table presents the details of IMEA's asset retirement obligations, which are included on the balance sheet in other noncurrent liabilities:

Balance 5/1/23	Liabilities Incurred (Adjustments)	Accretion	Costs Incurred	Balance 4/30/24
<u>\$ 15,643,662</u>	<u>\$ (103,031)</u>	<u>\$ 782,192</u>	<u>\$ (1,441,358)</u>	<u>\$ 14,881,465</u>
Balance 5/1/22	Liabilities Incurred (Adjustments)	Accretion	Costs Incurred	Balance 4/30/23
<u>\$ 15,866,571</u>	<u>\$ 918,914</u>	<u>\$ 793,330</u>	<u>\$ (1,935,153)</u>	<u>\$ 15,643,662</u>

8. Net Position

GASB No. 34 requires the classification of net position into three components – net investment in capital assets, restricted and unrestricted. These classifications are defined as follows:

Net Investment in Capital Assets – This component of net position consists of capital assets, including restricted capital assets, net of accumulated depreciation and reduced by the outstanding balances of any bonds, mortgages, notes or other borrowings that are attributable to the acquisition, construction or improvement of those assets. If there are significant unspent related debt proceeds at year-end, the portion of the debt attributable to the unspent proceeds are not included in the calculation of invested in capital assets, net of related debt. Rather, that portion of the debt is included in the same net position component as the unspent proceeds.

Restricted – This component of net position consists of constraints placed on net asset use through external constraints imposed by creditors (such as through debt covenants), grantors, contributors or laws or regulations of other governments or constraints imposed by law through constitutional provisions or enabling legislation.

Unrestricted Net Position – This component of net position consists of net positions that do not meet the definition of restricted or net investment in capital assets.

When both restricted and unrestricted resources are available for use, it is IMEA's policy to use restricted resources first, then unrestricted resources as they are needed.

Illinois Municipal Electric Agency

Notes to Financial Statements

April 30, 2024 and 2023

The following calculation supports the net investment in capital assets:

	2024	2023
Utility plant in service	\$ 1,329,449,580	\$ 1,277,416,535
Accumulated depreciation	(440,478,810)	(408,285,469)
Construction work in progress	37,891,445	82,252,010
Subtotal	<u>926,862,215</u>	<u>951,383,076</u>
Less capital related debt:		
Current portion of capital related long-term debt	50,005,000	47,750,000
Long-term portion of capital related long-term debt	643,600,000	693,605,000
Unamortized loss on advance refunding	(15,033,344)	(17,577,371)
Unamortized premium	28,258,722	33,040,821
Subtotal	<u>706,830,378</u>	<u>756,818,450</u>
Add unspent debt proceeds:		
Debt service reserve from borrowing	76,144,356	76,781,374
Total net investment in capital assets	<u><u>\$ 296,176,193</u></u>	<u><u>\$ 271,346,000</u></u>

The following calculation supports the amount of restricted net position:

	2024	2023
Restricted investments	\$ 97,226,562	\$ 97,716,541
Less restricted assets not funded by revenues:		
Debt service reserve account	(76,144,356)	(76,781,374)
Current liabilities payable from restricted assets	(9,570,392)	(10,183,291)
Subtotal	<u>(85,714,748)</u>	<u>(86,964,665)</u>
Total restricted net position as calculated	<u><u>\$ 11,511,814</u></u>	<u><u>\$ 10,751,876</u></u>

9. Regulatory Items

IMEA has chosen to use the application of GASB No. 62 to recover certain costs in customer rates in future periods. Regulatory costs for future recovery include unamortized debt issuance costs; unrealized loss (gain) on investments represents the difference between an investment's cost and the current fair value of the asset; and other regulatory assets represents the asset impairment related to the Prairie State Jordan Grove assets. The residual value of the impaired assets are reported in IMEA capital assets. Regulatory credits include MISO ARR credits related to auction revenue rights that were higher than anticipated during rate setting. The following summarizes activity for regulatory items:

	Balance 5/1/23	Additions	Reductions	Balance 4/30/24
Regulatory costs for future recovery	\$ 1,688,727	\$ -	\$ 245,005	\$ 1,443,722
Unrealized (gain)/loss on investments	641,238	881,067	-	1,522,305
MISO ARR credits	(6,909,337)	-	6,909,337	-
Total	\$ (4,579,372)	\$ 881,067	\$ 6,664,332	\$ 2,966,027

	Balance 5/1/22	Additions	Reductions	Balance 4/30/23
Regulatory costs for future recovery	\$ 1,949,307	\$ -	\$ 260,580	\$ 1,688,727
Unrealized (gain)/loss on investments	1,288,422	-	647,184	641,238
Other regulatory assets	6,638,449	-	6,638,449	-
MISO ARR credits	-	(11,659,337)	4,750,000	(6,909,337)
Total	\$ 9,876,178	\$ (11,659,337)	\$ (2,796,213)	\$ (4,579,372)

10. Employee Retirement Plan

IMEA's employees are covered by the Illinois Municipal Electric Agency Pension Plan, a defined contribution pension plan with a 5-year vesting schedule. Benefit provisions and all other requirements are established by the board of IMEA. IMEA contributes 25% of eligible employee earnings on behalf of each employee. Employees that terminate service prior to being fully vested, forfeit the unvested portion of their account balance, which is applied to future contributions to the plan. Total pension expense was equal to total contributions to the plan made by IMEA, net of applied forfeitures. For the years ended April 30, 2024 and 2023 total contributions were \$1,018,000 and \$1,043,000, respectively.

11. Contracts and Commitments

IMEA has long-term and short-term contracts and commitments with various wholesale power suppliers to supply energy, capacity and transmission services to its members. These contracts vary in length and have flexible terms and cancellation provisions. These contracts may be material to the financial statements.

In the normal course of business, IMEA may be involved in various disputes with other parties. While management cannot predict the ultimate outcome of these disputes, total exposure is not material to IMEA's financial position or results of operation.

Notes to Financial Statements
April 30, 2024 and 2023

12. Illinois Senate Bill (SB) 2408

In 2021, Illinois passed SB 2408, the Climate and Equitable Jobs Act (CEJA). The CEJA requires a 45% reduction in existing publicly owned Illinois power plant carbon dioxide emissions by January 1, 2035. If such reduction is not met by December 31, 2035, then the plant must retire one or more units or otherwise reduce carbon dioxide emissions by 45% by June 30, 2038. The CEJA further requires all publicly owned coal-fired generating units to permanently reduce carbon dioxide emission to 0 by December 31, 2045.

The CEJA does, however, provide that if the reduction of output from or the closing of any plant creates a power grid supply or reliability shortfall in the State of Illinois the plant can continue to operate until the reliability can otherwise be addressed. During the 2022/2023 planning year, Illinois was a net capacity importer. With the announced and required retirements, there is potential that Illinois will need to import even more capacity into the future.

The CEJA has a limited future impact on IMEA's ownership share of the Prairie State Generating Company, LLC (PSGC or Prairie State). The CEJA will not adversely affect IMEA's ability to pay bondholders due to all bonds maturing on February 1, 2035 or to reliably provide members with their power supply requirements. IMEA and the other owners of Prairie State have and continue to develop plans to manage the potential impacts of the CEJA. Potential impacts cannot be gauged with certainty at this time.

13. Sierra Club Lawsuit

IMEA holds a 15.17% undivided ownership interest in the Prairie State Energy Campus (PSEC) which is operated through the Prairie State Generating Company (PSGC). On October 20, 2022, the PSGC received a Notice of Intent (NOI) to file suit from the Sierra Club (SC) alleging violations of the Federal Clean Air Act. The NOI to PSGC allowed SC to file suit on or after December 19, 2022. On March 22, 2023, the SC filed a suit against PSGC. The SC alleges that PSEC is in violation of the Federal Clean Air Act because it does not have a Title V permit from the Illinois Environmental Protection Agency (IEPA). PSEC however does have and is believed to be operating legally under its Prevention of Significant Deterioration (PSD) permit from the IEPA. Therefore, IMEA does not believe the suit has merit or that it is likely to have a material impact on the finances or operations of PSEC. However, IMEA cannot be certain that the suit will not result in a material impact on the finances or operations of PSEC. On May 23, 2023, PSGC filed a Motion to Dismiss. The Court has not yet ruled on the Motion to Dismiss.

14. Emission Regulations

On May 9, 2024 the US Environmental Protection Agency (USEPA) issued rules governing greenhouse gas emissions, effluent limitations from coal-fired power plants and ozone standards. These rules are facing many legal challenges, also numerous motions to stay the new rules have been filed. If these new rules survive legal challenge, then they may have an impact on IMEA's generation sources. IMEA continues to monitor these proceedings and will take appropriate action concerning the rules, as necessary.

15. Significant Customers

IMEA has two significant customers who were responsible for 48% of operating revenue in both 2024 and 2023.

Illinois Municipal Electric Agency

Notes to Financial Statements
April 30, 2024 and 2023

16. Risk Management

IMEA is exposed to various risks of loss related to torts, theft of, damage to or destruction of assets, errors and omissions, workers compensation and health care of its employees. These risks are covered through the purchase of commercial insurance, with minimal deductibles. Settled claims have not exceeded coverage in any of the past three years. There were no significant reductions in coverage compared to the prior year.
